

INSTRUCTION SHEET

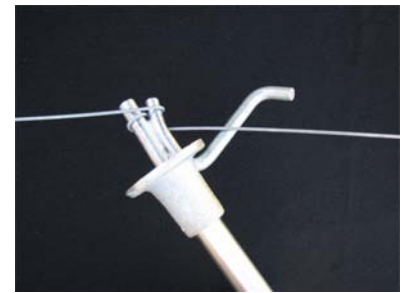

PREVENTING CROSSED WIRES

TAKE CARE

- When starting to strain wire make sure that you do not cross wire.
- This will cause the wire to feed in opposite directions.
- This can lead to the Klaw Klip twisting and it may come out of wire

PREVENTION

- To prevent crossed wires, push unit towards wire and if necessary rock handle from left to right to keep wire in correct position.

Finished correctly, the wire should look like this.
