

INSTRUCTION SHEET

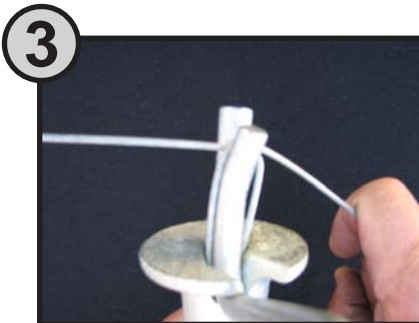

JOINING WIRE

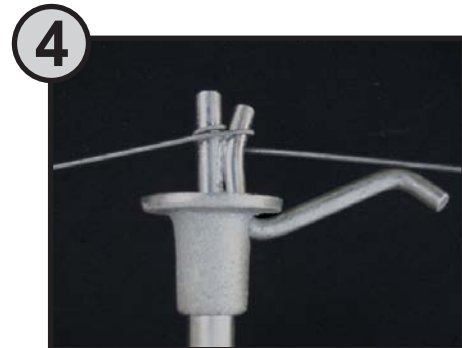

1 Place broken wire down the side of Klaw Klip into handle and bend between claws of Klaw Klip.

2 Place second wire down other side of Klaw Klip sliding wire into handle and bend between claws of Klaw Klip.

3 Placing wire into handle prevents it slipping out before wire is repaired.

4 Strain wire as normal.

REMEMBER

- Always place left hand wire down side of Klaw Klip first.
- Then place right hand wire down beside wire nearest you as in picture 2 above.
- This prevents kinking of wire and gives the correct join as seen to the right.

Completed Join.
